

Reference Project - Exterior Lighting IBB Broadcasting Station - Lampertheim

Project outline

A new inner fence system was installed at the International Broadcasting Bureau (IBB) in Lampertheim.

Subsequently, the area between the outer and inner fence system required lighting for the security guards.

A general contractor took care of the cable trench and the foundations for the 22 13.5-meter-long lighting poles.

A total of over 9,000 meters of ground cable and flat ground connections (V4A) were laid.

All of this was carried out while the broadcasting station's regular operations continued.

Project data

Built in 2010

Size of the area: 2.56 ha

Project total: EUR 125,000

Services rendered

Laying of cables and Connections

Setting up of lighting poles

Mounting of attachment lights

Refurbishment of the electric power distribution system
